

Erik Wahl's AV requirements

Audio:

- 1/8" Live audio feed will need to be run to the FRONT OF THE STAGE for a laptop connection.
- Wireless handheld microphone with a stand on stage
- Wireless pack with Shure connection to plug into Erik's personal countryman E6

Notes:

There will be music clips from the lap top during the slideshow. Playing them at ample level to fill the room is a must as it drives the impact of the performance. Please **DO NOT** mute the computer feed until Erik is done with the entire program, there are audio levels that build up and go down. At the conclusion of his program he will speak over the audio bed music to build the finale.

- The quality of the audio is very important to the overall impact of the presentation. We recommend additional sub woofers to carry the highs and lows of the rock music from Erik's presentation and fill the room with concert quality audio.

Video:

- Two Camera IMAG shoot is recommended.* A professional show producer travels with Erik on site to every program to ensure flawless execution. *(see notes below regarding IMAG*)*
- Erik's presentation is run in hi quality HD 16:9 format. An HDMI line will need to be run to the FRONT OF THE STAGE to be connected to Erik's Apple Macbook Pro.
- LCD Projector with very powerful lumens is necessary to run music videos from Erik's Computer.

Notes:

We strongly recommend the use of at least 2 camera Image Magnification capabilities for the live show. One long range camera for standard corporate shots from the back of the room, and one freestyle camera to come up on stage and shoot Erik live while painting. This is an opportunity to give your audience a unique multimedia keynote experience; creating multi-angle intimate IMAG plays beautifully to the strengths of Erik's presentation.

Please note that Erik's show producer, Will Rosenberg will be on site to handle all of the logistical set up, as well as to step in along side the AV team and CALL this portion of the show. He is there to ensure flawless execution of every presentation.

***If a second camera is not possible for the event we have the option of bringing our own GoPro camera and would simply need a second HDMI line run to the back of the stage for this alternative option.*

Painting:

- 2 cocktail style tables ("low-boy" — approximately 32 inches high)
- 2 water pitchers or 1 bucket (1-5 gallon bucket with water to hold used paintbrushes)
- 1 heavy duty flip chart easel for Erik's painting station.
 - *(see example DaLite 77755 Heavy Duty Non-Folding - Black/Silver Anodized A-Frame Easel.)*
- 3 supplementary flip-chart easels or tripod easels.
- 4 sandbags to help stabilize the sturdy easel.
- 3 canvas drop clothes roughly 5' x 5'. *(one for the ground, 2 for the tables)*
- 1 can of flat white spray paint *(Rust-Oleum or comparable brand)*
- 1 roll of removable AV tape *(gaff tape)*
- 1 Chair - *Erik uses the chair as a theatrical stage prop; to sit on as well as interact with. We recommend any singular comfortable well lit sofa chair; if we had a preference it would be one with artistic character or tastefully appointed sleek stage design.

Notes:

- Included in the flat expense fee, Erik will pre-purchase and ship 2 — 32'X48' canvases, paint, and brushes to arrive at the conference hotel under his attention. Erik will pick them up upon arrival at the hotel and bring them to the venue.
- Everything else in the **PAINTING** section above needs to be covered by the Client/ Hotel/ AV team.

AV Calls/Connection:

- We want to work alongside your AV team to ensure flawless execution and blow the audience away. Erik's show producer will be onsite to "call" the show while Erik is on stage.
- 1 AV call to occur a minimum of 4 weeks prior to the keynote and a 2nd follow up call approximately 1 week prior to the keynote to ensure that everything is in place a for great show.

Stage layout:

- See diagram below mapping out placement of the painting elements on stage.
- The exact placement of easels and painting station will be finalized during AV set-up time.

Here is a rough overview of what the stage needs to look like for Erik's presentation. Things can be adjusted to fit the specific venue and stage set-up relative to the screen placement.
